Apartment buildings face mold and air quality challenges that unit-by-unit cleaning can't solve. Shared HVAC systems, stacked plumbing, and interconnected wall cavities mean a problem in one unit spreads to others before it's ever found. MoldCure's dry-fog sanitization treats the entire building simultaneously — every unit, corridor, mechanical space, and duct — eliminating mold, spores, and pathogens at the source in a single visit.

WHAT MAKES MOLDCURE DIFFERENT

-  **Whole-Building Coverage in One Visit**
Our VaPURE™ dry fog reaches shared HVAC ducts, wall cavities, crawl spaces, and common areas — not just individual unit surfaces.
-  **Stops Cross-Unit Mold Spread**
By treating the entire building at once, we eliminate the shared air pathways and hidden cavities that allow mold to migrate between units.
-  **Minimal Resident Disruption**
Treatment is performed after hours or over a weekend. Residents can return the same day — no extended relocation required.
-  **GLP Lab-Validated Technology**
Independent testing confirms zero viable mold spores remaining on treated surfaces — documentation suitable for property management records and lease disclosures.
-  **Safe for Residents & Pets**
Once the fog dissipates and the building is aerated, it is safe to re-enter — no harsh residues or chemical odors.

BENEFITS FOR PROPERTY MANAGERS

-  Eliminates mold complaints across all units
-  Removes musty odors from hallways and common areas
-  Reduces tenant health complaints and turnover
-  Improves building air quality scores
-  Provides lab-validated documentation for records
-  Prevents costly remediation from recurring outbreaks

FLEXIBLE SERVICE PLANS

We offer recurring sanitization programs tailored to your building's size, occupancy, and seasonal humidity patterns. Annual, semi-annual, and quarterly schedules available for the DC metro area.
