LAB VALIDATED

Senior-living environments require exceptional standards of cleanliness, odor control, and infection prevention. MoldCure's dry-fog sanitization system treats air and surfaces simultaneously, reaching deep into rooms, vents, fabrics, and high-touch areas to reduce airborne contaminants and measurably improve indoor air quality.

WHAT MAKES MOLDCURE DIFFERENT

Whole-Building Coverage

Our dry fog fills each room like a vapor, reaching high ceilings, corners, vents, and soft surfaces that manual cleaning can't access.

Fast & Non-Disruptive

Most treatments take under an hour per zone. No moving furniture. No residue. No downtime for residents or staff.

Scientifically Validated Technology

Hospital-grade disinfecting solution backed by independent GLP laboratory testing — complete kill of bacteria, mold spores, and fungi on porous and non-porous surfaces.

Safe for Residents & Staff

Once the fog dissipates and the space is aerated, rooms are immediately safe to re-enter. No harsh odors or cleanup required.

Odor Elimination

Removes persistent odors from kitchens, laundry areas, resident rooms, and common spaces — improving first impressions for families and visitors.

BENEFITS FOR YOUR COMMUNITY

- ✓ Reduces airborne pathogens and mold spores
- ✓ Enhances resident comfort and satisfaction
- ✓ Supports infection-control protocols
- ✓ Lightens housekeeping workload
- ✓ Improves indoor air quality throughout the facility
- ✓ Eliminates odors at the source
- ✓ Provides peace of mind for families and staff

FLEXIBLE SERVICE PLANS
